A global tech outage that was related to a software update by cybersecurity firm CrowdStrike affected nearly 8.5 million Microsoft devices, Microsoft said in a blog on Saturday. "We currently estimate that CrowdStrike's update affected 8.5 million Windows devices, or less than one percent of all Windows machines," it said in the blog. CrowdStrike has helped develop a scalable solution that will help Microsoft's Azure infrastructure accelerate a fix, Microsoft said, adding that the tech giant had worked with both Amazon Web Services and Google Cloud Platform to collaborate on the "most effective approaches."

TCS Oman office set for inauguration on Feb 24: Head of firm's Middle East & Africa region

TCS, now has a country office in Oman which is set to be inaugurated next month, expanding the footprint of the Indian IT giant in the Middle East, according to a top official of the company. Interacting with PTI on the sidelines of a global conference in Riyadh, Sumanta Roy, president and head of the Middle East and Africa business region of the TCS, said the inauguration is planned to be held on February 24.

"We have a country office now in Oman, it was informally opened a few months ago, but now the formal inauguration will take place next month," he said when asked about the firm's future plans in the region.

"We have requested the ambassador of India (in Oman) for the inauguration event," Roy told PTI in an interview here.

Top 3 Advantages Of IOT Projects

1.Increased Efficiency:

Automate tasks and processes, reducing manual labor and minimizing errors. Optimize resource allocation and utilization, leading to cost savings. Improve productivity and throughput in various industries.

2.Enhanced Data-Driven Decision Making:

Collect and analyze vast amounts of data from connected devices, providing valuable insights. Make informed decisions based on real-time data, reducing the risk of errors. Improve forecasting and predictive maintenance.

3.Cost Savings and Revenue Growth:

Reduce energy consumption and waste through optimized resource allocation. Minimize maintenance costs through predictive maintenance and reduced downtime.

Students seek clarity as Infosys offers two pre-training rounds

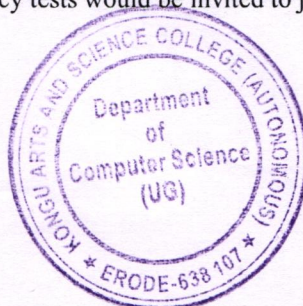

Infosys has asked about 1,500 students from the April 2022 batch having offer letters to appear for two rounds of pre-training. Of the total, India's second-largest software services company has given September 2 as the joining date to only about 115 students, while the rest remain in a state of flux about their job prospects.

Hiring worries at Infosys underscore a broader squeeze in recruitment in the technology sector due to factors such as economic uncertainties and increasing automation. Indian IT firms are under pressure from students, public outcry and worker unions over the onboarding delays.

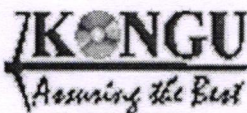

In July, Infosys had called all the selected students for a mandatory virtual pre-training programme for 24 days. Following this, another self-learning module-based pre-training was organised for some students in August which resulted in joining dates allotted to the 115 students. For the remaining students, there is limited clarity on the assessment and confusion of login credentials to some students for the second pre-training round. There have been no rejection letters yet, multiple people in ..

Earlier this month, students received an email from Infosys' recruitment team for a second six-week virtual pre-training starting August 19, which included a self-learning module, followed by an in-person assessment across cities. Further, those who clear the competency tests would be invited to join an in-person immersive training programme.

Honor launches the 'world's thinnest' foldable

Honor has announced the Magic V5, which it says is the thinnest foldable phone in the world right now — though only if you ignore the raised camera module, and only for its white version. The phone launches today in China, but Honor says an international release is coming “soon.”

At 8.8mm thick when folded shut, the V5 is indeed impressively thin, and beats the 8.9mm Oppo Find N5. That 0.1mm difference is imperceptible in practice, though a very slight curvature does help Honor's phone feel a hair thinner than the Oppo. That's only true for the phone's “Ivory White” version though, with the other colors very slightly thicker at 9mm, which suggests they'll use different materials for the final finish.

Perhaps more tellingly, you've also got to completely ignore the camera. The Magic V5's triple rear camera module rises almost twice as high as Oppo's, making the phone feel thicker overall as a result. Superior specs, with higher resolution sensors and faster apertures almost across the board, may justify the extra heft, but it does diminish that “world's thinnest” claim.

How scientists created an 'artificial' total solar eclipse to unlock the Sun's secrets

The sun's corona (or outer atmosphere) has proved a difficult subject for solar scientists on Earth to study, appearing only in a total solar eclipse. This phenomenon, occurring once in around 18 months, was their only opportunity to observe parts of the corona. However, with Proba-3's recent mission, research can advance at a much quicker pace. The European Space Agency (ESA) on June 16, announced that the Proba-3 mission had created an 'artificial total solar eclipse' in orbit.

This was achieved as the mission's two spacecraft – the Coronagraph and the Occulter – flew in formation 150 metres apart, and aligned so that the Occulter's disc covered the sun's disc, casting a shadow onto the Coronagraph's optical instrument. "I was absolutely thrilled to see the images, especially since we got them on the first try," Andrei Zhukov, principal investigator for ASPIICS at the Royal Observatory of Belgium, said in a statement.

Edge computing is a distributed information technology (IT) architecture in which client data is processed at the periphery of the network, as close to the originating source as possible. But this virtual flood of data is also changing the way businesses handle computing. The traditional computing paradigm built on a centralized data center and everyday internet isn't well suited to moving endlessly growing rivers of real-world data. Bandwidth limitations, latency issues and unpredictable network disruptions can all conspire to impair such efforts. Businesses are responding to these data challenges through the use of edge computing architecture.

Infosys And Adobe join hands to incorporate AI in marketing

Infosys and Adobe have announced a strategic collaboration to integrate artificial intelligence (AI) into marketing, aiming to transform how global brands engage with customers. This partnership combines Infosys' AI-powered marketing suite, **Infosys Aster™**, with Adobe's comprehensive **Experience Cloud** to deliver hyper-personalized, data-driven marketing solutions at scale. The integration enables businesses to create immersive customer experiences, automate marketing workflows, and generate actionable insights in real time. Early adopters of Infosys Aster have already seen significant improvements, including increased repeat purchases, reduced operational costs, and higher sales. By leveraging Infosys' AI-first approach and Adobe's robust digital tools, this alliance is set to redefine the future of marketing with personalization, efficiency, and innovation at its core. The collaboration also supports rapid content creation, dynamic campaign execution, and better ROI tracking, making it a game-changer for marketers aiming to stay ahead in a competitive digital landscape.

Investors Go Bananas For Nintendo, IBD Stock Of The Day : Nintendo (NTDOY), the IBD Stock Of The Day, surged Wednesday after the video game giant revealed details of a highly anticipated game for its recently launched Switch 2 console. The Japanese company disclosed gameplay specifics for "Donkey Kong Bananza," the latest in its popular franchise featuring banana-crazed gorilla Donkey Kong. The game is set for release on July 17, exclusively for Switch 2, and will cost \$69.99.

Apple has acquired AI startup, Voysis, to enhance its virtual assistant, Siri. Meanwhile, Amazon's AI-powered voice assistant, Alexa, is being integrated into various devices, including cars and smart home appliances. In cybersecurity news, a recent study revealed that phishing attacks have increased by 65% in the past year, highlighting the need for robust security measures. Additionally, Google has launched a new AI-powered tool to help developers build more secure software. Microsoft has also announced a major update to its Azure cloud platform, featuring enhanced AI and machine learning capabilities.

End of spam calls? TRAI to issue tighter regulations in coming weeks

Looking ahead to 2025, TRAI is focusing on recommendations for satellite communications spectrum — a crucial issue involving major telecom companies like Jio and Airtel, as well as Elon Musk's Starlink.

TRAI Chairman Anil Kumar Lahoti said that tighter regulations to curb spam and a new consultation on an authorisation framework for telemarketers are expected soon.

The Telecom Regulatory Authority of India (TRAI) is also set to launch a pilot program this month to transfer paper-based and past customer permissions for receiving commercial communications onto its digital distributed ledger technology (DLT) platform.

This initiative, which aims to streamline the validation process, will allow for the verification of current permissions and offer consumers the option to opt out.

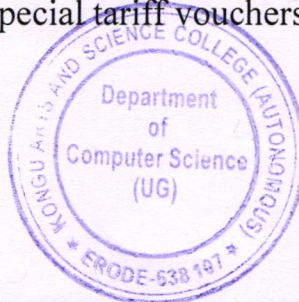

TRAI has also confirmed that it will not reconsider its recent regulation requiring service providers to offer separate special tariff vouchers (STV) for voice calls and SMS.

The IT field is currently undergoing several transformative changes. Here are some of the key trends as of September 2024:

Cybersecurity and Governance: As cybersecurity threats become more complex, there is an increasing focus on governance and structured processes to ensure best practices. Companies are also addressing the shortage of skilled cybersecurity professionals by upskilling existing employees and increasing overall cybersecurity spending.

Cloud Architecture: Organizations are moving beyond basic cloud adoption to develop multi-cloud systems and resilient architectures. This shift is critical for supporting advanced digital activities like data management, security automation, and DevOps processes.

“Credo Technology’s surge amid the AI data center boom”

Credo Technology has seen its stock price surge this quarter as demand for high-speed data-center connectivity explodes. The company designs and manufactures 400 Gbps SerDes modules that vastly increase data throughput. Fueled by AI workloads, hyperscalers like Amazon and Microsoft have become major customers. In the latest fiscal report, Credo posted a staggering 180% year-over-year increase in revenue. Earnings exploded by roughly 400%, reflecting both volume growth and improved margins. This performance earned Credo an Institutional Investor’s Composite rating of 99. Industry analysts now categorize the company as a must-watch hardware play in the AI infrastructure space. Orders have doubled sequentially, with a significant backlog stretching into next year. To scale production, Credo is working with leading contract manufacturers in Taiwan and Malaysia. The firm is also expanding R&D teams in San Jose and Bangalore to accelerate next-gen optical interconnects. Credo’s success is tied to the broader AI boom, as data centers race to keep up with training and inference demands.

OpenAI's Google-style SearchGPT infuses search with AI

OpenAI announced a prototype of SearchGPT, to let some users access AI search features in order to get real-time information from the internet, in the style of a search engine like Google. OpenAI announced the prototype of an AI-infused search feature, called SearchGPT, which is meant to give users responses backed up by real-time information linked back to sources, in the style of Google. The AI company behind ChatGPT said that SearchGPT would be released to a small group of publishers and testers in order to get feedback, so the tool is not publicly available. Much like using Google's Gemini, SearchGPT users will get responses that rely on up-to-date web information, while many of OpenAI's models usually have knowledge cut-off dates.

CYBER SECURITY

In today's digital world, cybersecurity has become an essential part of every company's strategy for sustainability, security, and growth. As businesses grow, the demand for cybersecurity talent will only continue to grow in 2023 and beyond.

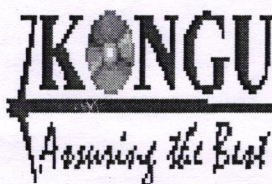

Cyber security is a growing industry that is still in need of skilled professionals. The global cyber security market is expected to grow from \$170 billion in 2017 to \$202 billion in 2023.

The demand for cyber security jobs has risen significantly over the past few years. More than 1 million cyber security jobs will be available by 2023, but less than 400,000 cybersecurity professionals will be trained by then. Cyber security is an ever-growing industry. It is projected to grow by 11% in 2023 and by 20% in 2025. This is a fast-placed career with a median salary of \$81,000.
